

BIOLOGY

The Biology Scholarship paper is intended to give scope for very able candidates to show their strength and potential. The questions set could be on any topic in a GCSE specification and a good guide to this would be a students' guide to Biology produced by CGP (Coordination Group Publications) or an IGCSE textbook.

It is the ability of the candidates to deal with data and concepts in unfamiliar settings, to interpret data and to draw logical conclusions, that is being tested and not just straightforward recall.

A wide range of questions is set to cater for the fact that students from other schools may have covered different topics.

Subject areas may include:

- Breathing
- Reproduction
- Circulation & Heart
- Blood functions
- Temperature control
- Reflexes & Nervous system
- Digestion
- Enzymes
- Photosynthesis
- Respiration
- Adaptations
- Cell division
- Reproduction
- Inheritance

Please note that this is not an exhaustive list, but merely acts as guidance.

V. R. Muir
Head of Biology
