- Packaging

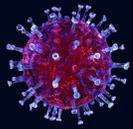

The Environment

Six animals that are no longer on the endangered species list are:

- Southern White Rhinoceros
- Giant Panda
- Arabian Oryx
- Grey Wolf
- Northern Brown Kiwi
- Louisiana Black Bear

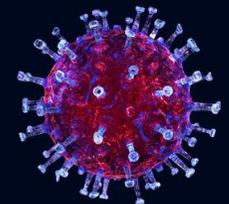

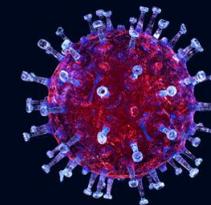

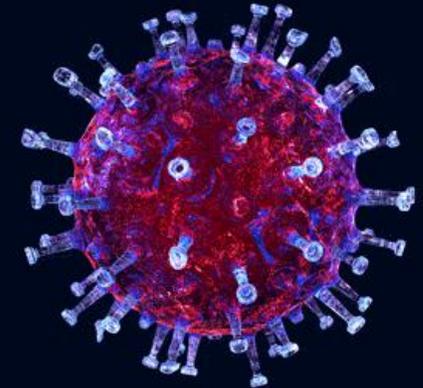

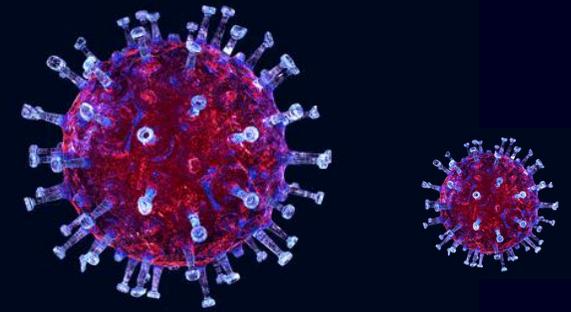

The world is in the midst of a COVID-19 pandemic. As WHO and partners work together on the response -- tracking the pandemic, advising on critical interventions, distributing vital medical supplies to those in need--- they are racing to develop and deploy safe and effective vaccines.

Vaccines save millions of lives each year. Vaccines work by training and preparing the body's natural defences – the immune system – to recognize and fight off the viruses and bacteria they target. After vaccination, if the body is later exposed to those disease-causing germs, the body is immediately ready to destroy them, preventing illness.

As of 18 February 2021, at least seven different vaccines across three platforms have been rolled out in countries. Vulnerable populations in all countries are the highest priority for vaccination.

At the same time, more than 200 additional vaccine candidates are in development, of which more than 60 are in clinical development.
